Etown Pet Profiles

Motivation:

My project proposal is a website that will have a profile for all of the pets that are currently living on campus (or Elizabethtown College property). I currently have an assistance animal on campus, and she went missing twice. Also, there are many times through out the semester where students will post on the Etown Jays app that they saw an animal on the loose. It would be nice if students were able to know the pets living on campus in case they catch one or simply spot one.

Definite Functionalities:

Student's Abilities:
- Submit a request to create a profile for their pet
    - Or, potentially just be allowed to create a profile for their pet

Pet's Profile:
- A picture
- Name
- Gender
- Appearance
- Nature
- If it is microchipped
    - Also there could be warnings in case the animal is aggressive or something like that.

There will also be another section that will contain info about the owner in case of emergencies.

Owner's Profile:
- Name
- Phone Number
- E-mail

Possible Functionalities:

- Lost Page:
    - A page that would have a listing of the current pets that are considered lost. The student of the pet could submit a form about where it was last seen.
- Seen or Found Page:
    - A page that would have a listing of the pets that someone saw or captured.
        - This could help update the most recent location of the animal.
- Emergency E-mails:
    - We could potentially send e-mails to students, faculty, and staff about the lost pet.
        - This would let campus security and Lynne Davies (Director of Disability Services) know.

Example of Pet Profile:

Pet Profile:

Name: Kyra Noir

Appearance: Long black fur, Green eye, Missing left eye, Pink flower collar with heart tag

Nature: Very timid and shy, loves to hide.

Microchipped: Yes

WARNING: SHE WILL RUN AWAY IF CHASED
